◀ GIS for Utilities and Communications

Electric

Main

Distribution

Transmission

Generation

Advance your network.

For decades, electric utilities have relied on ArcGIS. They manage assets and outages, serve customers, facilitate field operations, and create situational awareness. Now with cloud-based GIS, it's even easier to take advantage of location-based planning for accounting, network operations, and countless more departments where the power of location can advance your network.

Bring Web GIS On Site

Benefits

Visualize

See your data through a spatial lens to uncover patterns, trends, and monitor real-time events, all in one place. [\[PDF\]](#)

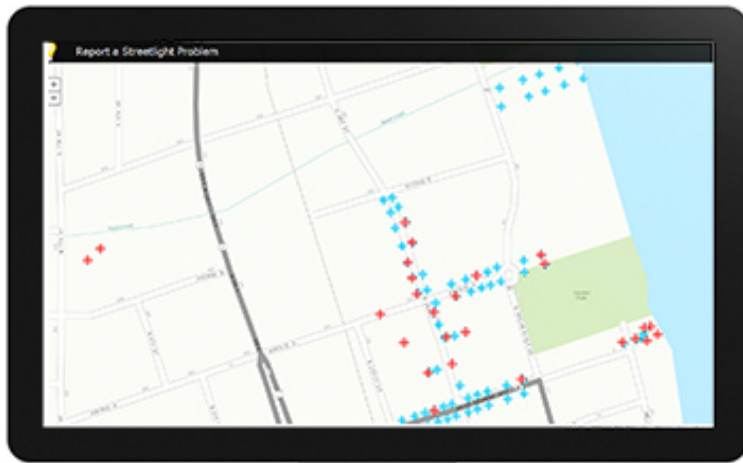

Advance

Let location-based analyses guide your next step forward. Make your data work for your best value.

Analyze

Answer complex questions with spatial analytics. Find the best location, visualize patterns, manage risks, and model costs.

Solutions

ArcGIS for Electric Utilities

ArcGIS for Electric derives new value from your data. Connect your mobile workforce on any device, and monitor operations in real-time. These templates help you manage outages and engage with your customers more effectively. It's never been easier to geo-enable your utility.

Learn how to optimize GIS for your utility.

ArcGIS GeoEvent Extension for Server

Big data? Big opportunity. GeoEvent Extension builds real-time maps fed by all your data inputs – no matter how many you use. Put the latest information on mobile devices, track environmental changes, and keep decision-makers informed. Condense what you need to know when you need to know it.
